

ENVIRONMENTAL RESOURCES AND COMPLIANCE

As we continue to develop cleaner, safer, more successful communities, we have an equal responsibility to care for our natural environment by ensuring that today's projects sustain the environmental health of our planet for generations to come.

Protecting our natural resources requires a vigilant eye for changing regulations and a solid knowledge of the latest and best methods of testing, remediation, and restoration. But, at Olsson Associates, we recognize that simply knowing the newest regulations and technology is not enough. Our focus is on providing innovative, win-win solutions that are good for our clients, good for our communities, and good for the environment.

To achieve this goal, the Olsson Environmental team partners with each of our practice groups to design projects that are not only technically, economically, and socially acceptable, but environmentally sustainable as well. The success of our collaborative approach is seen in projects we have on the ground: wetlands that improve surface water quality; remediated urban sites that can now be safely redeveloped; restored habitat for rare, threatened, and endangered species; well fields that provide safe drinking water for our communities; and environmental regulatory compliance for our wide range of public and private clients.

ENVIRONMENTAL RESOURCES AND COMPLIANCE | SERVICES

- Air Quality Monitoring and Permitting
- Brownfields Studies
- CERCLA/Superfund Investigations and Compliance
- Endangered Species Act Compliance
- Environmental Audits
- Geologic and Hydrogeologic Studies
- Groundwater Monitoring
- Habitat Studies
- Habitat Restoration
- Hazardous Waste/Resource Conservation and Recovery Act (RCRA) Assessments and Remediations
- Landfills
- Migratory Bird Treaty Act Compliance
- National Environmental Policy Act (NEPA) Compliance (Environmental Impact Statements, Environmental Assessments, and Categorical Exclusions)
- Noise Studies
- Phase I and Phase II Property Assessments
- Soil, Sediment, Surface, and Groundwater Sampling
- Spill Prevention, Control, and Countermeasure Plans
- State Environmental Quality Act Compliance
- Stormwater Pollution Prevention Plans
- Underground Storage Tank Investigations and Remediation
- Well Field Studies
- Wetland Delineations and Permitting
- Wetland Mitigation and Restoration

The Olsson Environmental Resources and Compliance team combines the strength of experts in biology, ecology, geology, hydrogeology, meteorology, natural resources, and environmental engineering to solve past environmental problems and prevent future ones.
